

UArmorHandler::Handle

UHealthHandler::Handle

UAbstractHandler::Handle

```
graph LR; A[UAbstractHandler::Handle] --> B[UArmorHandler::Handle]; A --> C[UHealthHandler::Handle];
```

The diagram illustrates a class hierarchy where two concrete classes, UArmorHandler and UHealthHandler, inherit from a base class UAbstractHandler. The base class has a method named Handle, which is implemented in the concrete classes. The arrows indicate that the Handle method in UArmorHandler and UHealthHandler is derived from the Handle method in UAbstractHandler.
